Vocabularies and Common Data Elements Workspace (VCDE)
Liaison Meeting
Agenda for Teleconference
1:00pm – 3:00pm EDT
Tuesday, May 18th, 2004

AGENDA

1. Introductions / Roll-Call
2. Metadata and Domain Models: VCDE is responsible for content standards. Architecture is responsible for deployment system standards.
 - How should Domain Workspaces be representing their metadata and their domain models?
 - Is the caCORE approach suitable i.e. Form CDEs for case report forms, and class/attribute CDEs for UML-derived models? If not, what do we need to do?
3. Enterprise systems for managing vocabulary and CDE sources.
 - These are currently cast as VCDE workspace systems, but they need to fit into the Architectural paradigm for the grid system once it is instantiated.
 - What APIs to these systems are needed to support the grid Architecture?
 - Will they be single-site hosted systems, mirrors of single instances, or federated/multi-site systems with differing content in at each site?
4. Action items & Next Steps
